Ehtesham Mehdi

AI Engineer | Agentic Systems, RAG & LLM Applications

Islamabad, Pakistan | Open to remote opportunities worldwide

mehdiehtesham2@gmail.com | github.com/ehteshambuildagents

AI engineer building agent workflows, retrieval and LLM applications. Independently delivered an AI SDR platform used by roughly 1,000 people and a desktop agent used by 100+. Owns architecture, tool integration, deployment and operator review workflows.

PROFESSIONAL EXPERIENCE

Chief AI Engineer | 10x.ai

2026

- Led architecture and delivery of LLM applications, translating product requirements into agent workflows, retrieval strategies and tool integrations.
- Coordinated technical priorities across implementation, integration and deployment; reviewed model selection, reliability trade-offs and human approval boundaries.
- Defined evaluation checks for groundedness, tool success, latency and inference cost; investigated failures and drove iterative improvements.

Machine Learning Engineer Intern | CodeAlpha

- Prepared and explored datasets in Python/pandas; built baseline ML models and compared results using task-appropriate validation and metrics.
- Investigated prediction errors and data-quality issues; documented experiments, limitations and recommendations for model improvement.

SELECTED INDEPENDENT PROJECTS

Saqua (2025 - Sep 2026): Delivered Python research/writer agents for roughly 1,000 users; added inbox classification, human approval and five follow-ups at four-day intervals. Shipped on Railway with Streamlit.

JARVIS (open-source fork): Added Windows support, background launchers, voice dismissal and a loopback-only bridge; 25 stars / 11 forks (Oct 2026).

BylineKit: Packaged twelve Claude skills and two Python cleaning/scoring tools with 39 repository tests; kept publication under human review.

Local-First Desktop Agent: Shipped a Llama/Kimi desktop assistant for 100+ users, including local inference and system-level tool execution.

Resistive (prototype): Combined classical ML and LLM analysis of brand-specific Meta ad data to assess hooks, retention and spend efficiency and propose creative tests.

Upwork Autopilot: Used MCP for job monitoring, fit scoring, proposals and replies; reduced response delays from 10-12 hours to near-immediate, with rules for bid spending.

TECHNICAL SKILLS

Agentic AI: LangGraph, multi-agent orchestration, tool / function calling, Model Context Protocol (MCP), Claude Agent SDK, human-in-the-loop approval

Retrieval & memory: Retrieval-augmented generation (RAG), pgvector, semantic search, persistent memory, context engineering, PostgreSQL / SQL

LLM applications: Prompt / system-prompt design, OpenAI / Claude APIs, multi-provider routing, cost-aware model selection, open-weight models (Llama, Kimi, DeepSeek)

Engineering & delivery: Python, FastAPI, async services, REST APIs, pandas, Streamlit, Railway, local inference, Claude Code, ElevenLabs
